OCTOBER 14, 2022

Questions and Answers 1 of 1.

Question 1:

For the bidding of CA and Inspection can an estimated or generic construction schedule be given for bidding purposes? Bidding of this item could differ greatly between proposals based on what we each assume is a fair time for construction. If we have a timeline i.e., 2-month construction period or a unit rate for CA and price per inspection we can provide comparable bids for this item.

Answer 1:

The Municipality clarifies that the design concept included as Schedule A of the RFP is a document that the successful Proponent will use as a reference to guide consultations with the Municipality. The successful Proponent will need to prepare a final design and the associated construction timeline, considering the following information:

- The Municipality has a total budget amount of \$676,616.00 to dedicate to this project.
- The primary focus of the project is to address health and safety hazards posed by the existing infrastructure. Further improvements will be restricted by the budget.

The Municipality is relying on the expertise of the consultant to determine an infrastructure solution that is feasible to complete within the required funding timeline and budget, noting that agreement extensions with the funding agency may be requested to allow for construction in 2024.
